

Nxt Assess - Project Overview

Jobby App - Project Overview

A job search platform helping users find opportunities based on skills, salary, and employment type. Built with React.js and JWT-based authentication.

Key Features

- Secure Login with JWT Authentication
- Home Page Introduction with Navigation
- Job Listings with Search and Filters
- Job Details Page with Company Info and Similar Jobs
- Responsive Design for Mobile and Desktop
- Protected Routes for Authenticated Users
- Error Handling with Retry Option
- Custom 404 Not Found Page

Technologies Used

- Frontend: React.js
- State Management: React Component State
- Routing: React Router DOM
- Styling: CSS (Flexbox)
- Authentication: JWT
- HTTP: Fetch API
- Icons: React Icons (Bs, Fa, Md)
- Loader: React Loader Spinner

API Integration

- POST /login -> Authenticate user and receive JWT
- GET /profile -> Fetch user profile details

Nxt Assess - Project Overview

- GET /jobs -> Retrieve job listings (filters supported)
- GET /jobs/:id -> Get job description and similar jobs

Working Flow

1. User logs in via Login page (JWT saved in cookies)
2. Redirected to Home page with brief intro and CTA
3. Navigates to Jobs page to view and search jobs
4. Applies filters for job type and salary
5. Selects a job to see detailed description
6. Can visit company site or view similar jobs
7. Handles errors and invalid routes gracefully

Future Enhancements

- User Profiles with Job Preferences
- Bookmarking/Save Jobs Feature
- Advanced Filters (Remote, Experience Level)
- Dark Mode for Accessibility

Conclusion

Jobby App offers a seamless job search experience with secure authentication, effective filtering, detailed job info, and responsive UI. A solid demonstration of frontend development best practices.
